This error is more of a report than an error. It's purpose is to get the user to alert you to the problem which is simply that the Publishing Dates were not set correctly when you as Admin first manually approved the listing. Thus the listing can't expire because the publish down date is the Mtree default value of:

0000-00-00

00:00:00

which is basically interpreted as never expire. To fix you'll need to Edit the Subscription from PaymentsPlus Manage Subscriptions and set the correct publishing conditions.

See from page 43 in the PaymentsPlus 2.20 user manual to see what triggers the different statuses.

If however you are adding and approving listings from Mtree Admin then you've bypassed the PP system and you'll need to override the publishing conditions and set them accordingly to show the payment options.
