

Listing does not display correctly if created or edited from Back End

Written by Administrator

I created a new listing in Admin from Mtree and or changed the User from Admin to a User but the payment buttons are not showing in the Users My Listing Management area - or the listing does not display as expected on the front end.... Why?

Listings should be placed from the sites Front End to pass the required values to both PaymentsPlus and the Host Application. You must remember that PaymentsPlus plugs into the Host Application and not the other way around. So if creating a listing in the Admin area of the Host Application, you must also manually create a matching subscription in PaymentsPlus -> Manage Subscriptions -> New to assign the product values to the Listing. Alternatively you would need to alter the database directly using PhpMyAdmin or something similar and add the appropriate PaymentsPlus Product ID (ipn_product_id) to jos_mt_links to the assigned link_id.
