

How to make Add-Listing fields required?

Written by Administrator

When a registered user goes to add a listing it seems that the only field that is required is the Listing Name. If all other fields are left blank it still accepts the submission? How do I make some fields as required in your form?

Field validation is a bit tricky, firstly you'll need to set the field as required in Mtree Custom Fields. Then if you want a custom message when the field is empty you'll need to modify the Validation Script found in `components/com_mtree/templatesgeneric_scripts.php`
