

## **My Custom Fields are not displaying in the Free or Standard Add Listing Templates**

The principal and idea behind these templates is to allow you to build your own Listing Products based on the features you want available to each Listing Type. Once the Listing Types are created you can then add products based on the listing type.

Only the Featured template is dynamic, the Free and Standard add listing templates need to be manually modified. The add listing templates provided by PaymentsPlus are simply a guide to what can be done and show you how to add new core or custom fields. For the fields to work with the PaymentsPlus modified templates they must be published in Mtree and set to display in the summary or detailed view and if not required in the modified templates the section for that field should be commented out.
