I get a whole bunch of errors when I try to Re-Install PaymentsPlus, Why ? and How to Fix?

If the Errors start with this:

JInstaller::install: SQL Error. DB function failed with error number 1062

Duplicate entry '1' for key 1 SQL=INSERT INTO `jos_ajp_orders_config` and a whole lot more after it.

Then the error shows that you've tried to install twice, uninstalling does not remove the database tables. In the original PaymentsPlus zip there's a folder named Reinstall instructions inside further instructions are inside that.
