Gateway settings won't save and returns an error after updating payment info or saving data base settings

Possible Errors:

Error CONFIG_NOT_WRITE

Fatal error: Cannot break/continue 1 level in

/home/XXX/XXX/administrator/components/com_paymentsplus/controllers/paypal.php on line 81

Solution:

Any of these will mean that ipn_config.php is not writable you'll need to chmod this file to 0766

The location of the file is:

your joomla root/administrator/components/com_paymentsplus/ipn/ipn_config.php

If your not sure how to do this, some FTP programs will allow you to change Write permissions for files, otherwise you could use File Manager in your Servers Cpanel to change the permissions.
