

Warning: include_once.... page_addListing.tpl.php on line 116

Written by Administrator

Line 116 is looking for the name of the template which is sourced by a DB queries from lines 5 to 20 in page_addListing.tpl.php. The usual cause for this error is that the template file name has not been correctly configured in **PaymentsPlus > Manage Listing Types** for each listing type.

From version 2.15 onwards the Listing Type Template should be set as **page_addListing_generic_FORM.php** unless you are using your own custom add listing template in which case that file name should be included here.

If you have edited this for EACH Listing Type and still get an error then the following are some things to check:

1. Check the Database with PhpMyAdmin from Cpanel and make sure the entry has been saved correctly. Table: jos_ajp_orders_list_types Column: types_template
2. Check all settings as recommended by the manual for both PP & Mtree.
3. Make sure all the templates have been uploaded correctly as per the folder structure in the patch.
